CHAT PROGRAM using Socket Programming

AIM:

To implement CHAT PROGRAM using Socket Programming

CHAT SERVER :

```
import socket
import threading
server = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
server.bind ("localhost", 12347))
server.listen(1)
Print("Chat Server is waiting for a client...")
conn, addr = server.accept()
Print("Client Connected:", addr)
def receive_messages():
    while True:
        try:
            data = conn.recv(1024)
            if not data:
                break
            Print("\n client :", data.decode())
        except:
            break
```

CHAT CLIENT:

```
import socket
import threading
client = socket.socket (socket.AF_INET, socket.SOCK_STREAM)
client.connect (("localhost", 12347))
Print("Connected to chat Server")
def receive_messages():
    while True:
        try:
            data = client.recv(1024)
            if not data:
                break
            Print("\n Server:", data.decode())
```

```
except:
    break

thread = threading.Thread(target=receive_messages)
thread.daemon = True
thread.start()

while True:
    message = input("Client: ")
    try:
        client.sendall(message.encode())
        if message.lower() == "exit":
            break
        except:
            break

client.close()
```
