Experiments on Packet Capture tool: Wireshark

Wireshark:

Wireshark, a network analysis tool formally known as Ethereal captures packets in realtime and display them in human readable format.

Procedure:

Capturing Packets:-

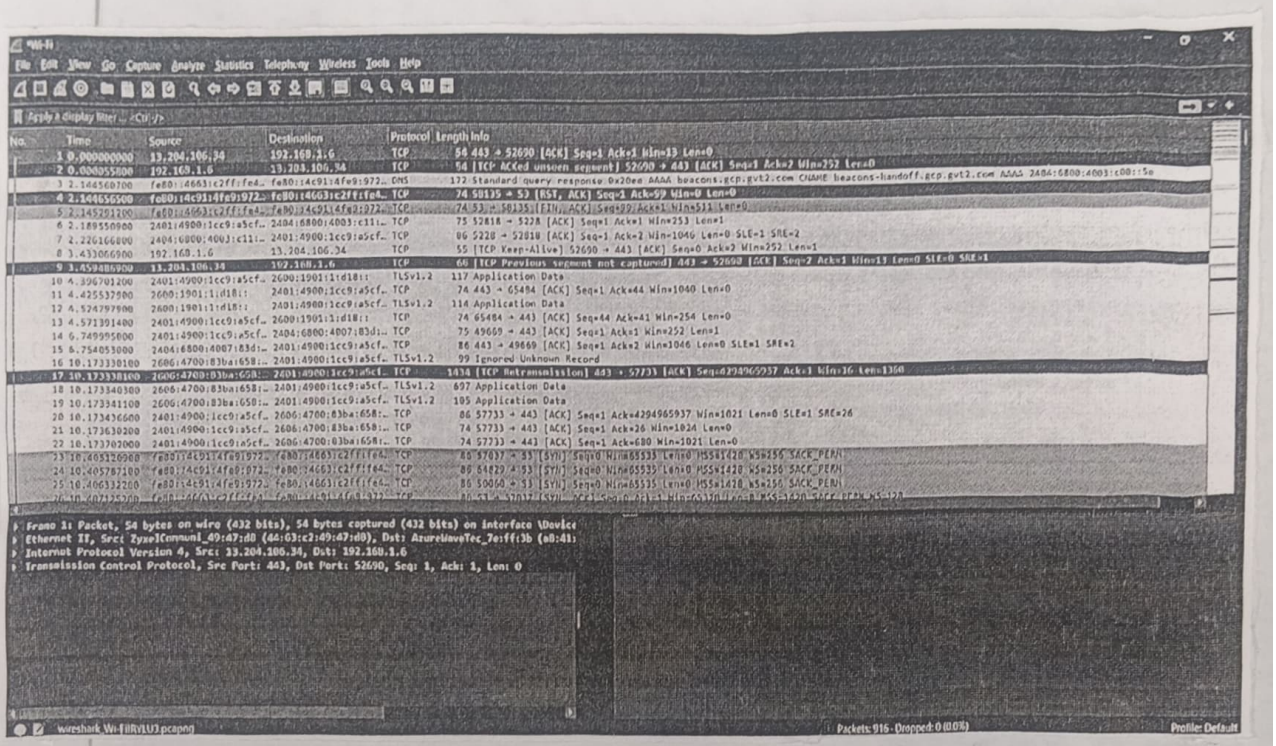

After downloading and installing wireshark, launch it and double click the name of a network interface under capture to start capturing packets on that interface. As soonas you click the interface's name, you see the packets start to appear in real time wireshark captures each packet sent to or from your system If you have permissions mode enabled its established by default you also see all the other packets on the nature network instead of only packets addressed to your network. To check if promiscous mode is enabled click capture > options and verify the "Enable promiscous mode on all interfaces' check box is activated at the bottom of this window Create a filter to display only FLP packet, inspect the packets and provide the flow graph

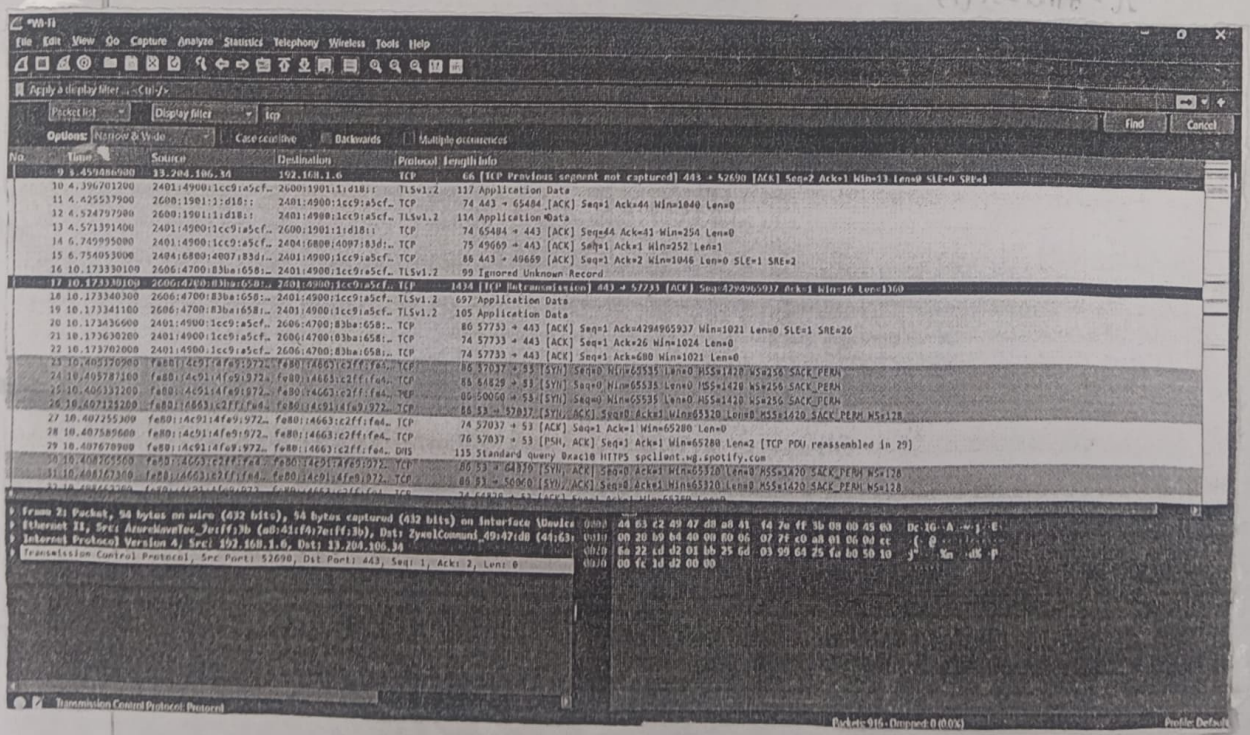

Procedure

* Select local area connection in wireshark
* Go to capture option
* Select stop capture automatic after 100 packets
* Then click start capture
* Search TCP packets in search box
* To see flow graph, click statistics flow graph
* Save the packets.

Procedure:

* Go to capture option
* Select stop capture automatically after 100 packets
* Then click start capture
* Search ARP packets in search base
* Save the packets.

RESULT:

Thus the packet capture was executed successfully using Wireshark.
